Education

Semarang State Polytechnic — Semarang, Indonesia
Bachelor of Applied Science in Computer Engineering Technology; GPA: 3.61/4.0 — *Graduated Sept. 2026*

Experience

Leadership Nasional Asia (LNA) — Indonesia
Part-Time Full Stack Developer — *May 2026 – Sept. 2026*

- Developed and maintained the company's main production websites end-to-end, from feature development to deployment, across two stacks: Next.js and Laravel with Inertia.js and React.
- Administered the production VPS hosting the company's websites, handling deployments, server configuration, and ongoing maintenance to keep the sites online.
- Configured Cloudflare rules for the company's domains and VPS to secure and manage incoming traffic.

Semarang State Polytechnic — Semarang, Indonesia
Research Assistant — *Feb. 2026 – Aug. 2026*

- Built an end-to-end edge perception and path-planning system on NVIDIA Jetson Orin NX (YOLO detection, stereo depth, BEV projection, occupancy grid mapping, A* planning), running at ∼25 FPS.
- Optimized the A* path planner with Numba JIT, lookup tables, and a weighted heuristic, cutting latency from 219 ms to ∼2 ms (∼115×) and raising pipeline throughput from 4 to 25 FPS with identical output paths.
- Deployed detection models via ONNX Runtime and TensorRT with FP16/INT8 precision; FP16 reduced latency by 31% (36.6 → 25.3 ms) with under 0.2-point mAP50 loss.

National Research and Innovation Agency (BRIN) — Indonesia
Research Intern — *Aug. 2025 – Dec. 2025*

- Redesigned the UI/UX of the MEVI autonomous vehicle dashboard, making its core functions more accessible to users.
- Engineered a 50,000-record driving dataset pipeline that synchronizes inputs from 6 multi-modal sensors (cameras, LiDAR, IMU, GPS, encoders).
- Prototyped a predictive model for waypoint navigation and analyzed training loss metrics to establish baselines for obstacle avoidance.

Projects

Sangkala Certify | *Next.js, React, TypeScript, Prisma, PostgreSQL, Vercel* | Live Demo — 2026

- Built a full-stack certification and assessment platform with a bilingual (ID/EN) marketing site, an admin dashboard, and a multi-role assessment portal, designed to replace spreadsheet-based certificate tracking.
- Implemented end-to-end certificate issuance: PDF generation with selectable templates, QR codes linked to a public verification page, bulk participant import from Excel, and automated expiry tracking with scheduled email reminders.
- Secured the platform with NextAuth, role-based access for five roles, an audit log of admin changes, and per-email and per-IP brute-force lockout; deployed on Vercel with Neon PostgreSQL.

SangkaLearn | *Laravel 12, React 18, Inertia.js, PostgreSQL, Docker* | Live Demo — 2026

- Built a full-stack learning and certification platform with course authoring (video, PDF, text), enrollment, progress tracking, quizzes, assignments, live sessions, messaging, and role-based access for 4 roles.
- Integrated Midtrans payments (QRIS, e-wallets, virtual accounts) with a webhook that automatically creates enrollments and sends confirmation emails after a successful payment.
- Containerized the app with Docker (multi-stage build, PHP-FPM, nginx, queue worker) and deployed it to Railway with managed PostgreSQL and health checks, with real-time notifications via Laravel Echo.

Technical Skills

Languages: TypeScript, JavaScript, PHP, Python, SQL (PostgreSQL, MySQL), HTML/CSS
Frameworks: Next.js, React, Laravel, Inertia.js, Tailwind CSS
Developer Tools: Git, GitHub, Docker, Nginx, Cloudflare, Vercel, Railway, VPS Administration, NVIDIA Jetson
Libraries: Prisma, NextAuth, Laravel Echo, Midtrans API, YOLO, ONNX Runtime, TensorRT, Numba
